FOR IMMEDIATE RELEASE – January 16, 2012

Creative Pultrusion's SuperPile Fender Piles Achieve Florida DOT Qualified Product Listing

Creative Pultrusions, Inc., successfully engineered, developed and manufactured two fender pile profiles for bridge protection applications. The 12" and 16" diameter piles are manufactured with Creative's SUPURTUF™ polyurethane resin matrix. The engineered matrix and glass reinforcement schedule, in combination with Creative's proprietary high pressure direct injection technology, equated into a high energy absorbing impact superior product.

The energy absorption characteristics are very impressive and have exceeded our design goals. Florida DOT recognized the superior energy absorption characteristics of the piles and added the SuperPile products to their Qualified Products List (QPL). QPL status gives Creative Pultrusions, Inc., the ability to supply fender piles on FLDOT bridge protection projects.

CPI is a world-class pultruder that utilizes the most advanced manufacturing processes to provide high-end profiles. Originally founded in 1973, CPI was acquired by Hill & Smith Holdings PLC (HS) in September 2008. A global leader in the design, manufacture and supply of infrastructure products, galvanizing services and building and construction products, HS has sales of over \$700 million. Headquartered in the UK and quoted on the London Stock Exchange, HS employs some 3,300 staff across 54 sites, principally in the UK, France, USA, Thailand and China.
